

Priority Chemicals Toxics Release Inventory Measurement Methodology – 2003-2007

1. Priority Chemicals Toxics Release Inventory Measurement Methodology

To identify and collect data on PCs reported to the TRI in 2003, 2004, 2005, 2006, and 2007, EPA undertook the following steps:

- Identify PCs reported to the TRI;
- Exclude TRI data that are not associated with primary generation; and
- Calculate PC quantities.

These steps are described below.

Step 1: Identify PCs Reported to the TRI

The Chemical Abstract System (CAS) numbers of the chemicals identified by EPA as PCs were compared to the list of TRI chemicals to identify the PCs reported to the TRI. Data on these chemicals were extracted from the TRI for reporting years 2003 through 2007. Exhibit 1 lists the PCs examined in the analysis.

Exhibit 1
Chemicals Examined in the PC TRI Measurement Methodology

Anthracene (120-12-7)	Methoxychlor (72-43-5)
Benzo(g,h,i)perylene (191-24-2)	Naphthalene (91-20-3)
Cadmium (7440-43-9) and cadmium compounds (N078)	Pendimethalin (40487-42-1)
Dibenzofuran (132-64-9)	Pentachlorobenzene (608-93-5)
Dioxins and dioxin-like compounds (N150)	Pentachlorophenol (87-86-5)
Heptachlor (76-44-8)	Phenanthrene (85-01-8)
Hexachloro-1, 3-butadiene (87-68-3)	Polychlorinated biphenyls (PCBs) (1336-36-3)
Hexachlorobenzene (118-74-1)	Quintozone (82-68-8)
Hexachloroethane (67-72-1)	Polycyclic aromatic compound (PAC) TRI category (N590)
Lead (7439-92-1) and lead compounds (N420)	1,2,4-trichlorobenzene (120-82-1)
Lindane (58-89-9)	2,4,5-trichlorophenol (95-95-4)
Mercury (7439-97-6) and mercury compounds (N458)	Trifluralin (1582-09-8)

Step 2: Exclude TRI Data that Are Not Associated with Primary Generation

Because the focus of the analysis is primary generation, certain TRI data were excluded from the analysis. The excluded data include:

- Data associated with Bevill exempt materials. Facilities that reported the North American Industry Classification System (NAICS) codes listed in Exhibit 2 as their primary NAICS code were excluded from the analysis, because it is assumed that all PCs reported by these facilities are associated with Bevill exempt materials.

Exhibit 2
Industries Assumed to be Associated with Bevill Exempt Materials

NAICS Code	NAICS Code Description
212111	Bituminous Coal and Lignite Surface Mining
212112	Bituminous Coal Underground Mining
212221	Gold Ore Mining
212222	Silver Ore Mining
212231	Lead Ore and Zinc Ore Mining
212234	Copper Ore and Nickel Ore Mining (pt)
212299	All Other Metal Ore Mining (pt)
221100	Electric Power Generation, Transmission and Distribution
221111	Hydroelectric Power Generation (pt)
221112	Fossil Fuel Electric Power Generation (pt)
221113	Nuclear Electric Power Generation (pt)
221119	Other Electric Power Generation (pt)
221121	Electric Bulk Power Transmission and Control (pt)
221122	Electric Power Distribution (pt)
221210	Natural Gas Distribution (pt)
331411	Primary Smelting and Refining of Copper
331419	Primary Smelting and Refining of Nonferrous Metal (except Copper and Aluminum)

In addition, all data reported by the following facilities were excluded, as they are associated with either the Bevill exempt titanium dioxide (TiO₂) process or the Bevill exempt red muds process:

- DuPont Edge Moor, DE (DED000800284)
- Kerr-McGee Pigments, GA (GAD003282803)
- Louisiana Pigment, LP, LA (LAD985185149)
- Millennium Inorganic Chemicals, Hawkins Point Plant, MD (MDD003093515)
- Kerr-McGee Chemical LLC Electrolytic Plant, MS (MSD007025117)
- DuPont Delisle Plant, MS (MSD096046792)
- DuPont Johnsonville Plant, TN (TND004044491)
- U.S. Borax, Inc., CA (CAD000630020)
- IMC Chemicals, Inc., CA (CAD048456941)
- Kaiser Aluminum and Chemical Corp. Gramercy, LA (LAD008182289)
- Sherwin Alumina LP, TX (TXD008129983)

- Alcoa World Alumina LLC Point Comfort Operations, TX (TXD008123168)
- Ormet Primary Aluminum Corp., LA (LAD093536522)

All data reported by the following facilities were excluded, as they are associated with blast furnace and basic oxygen furnace wastes, including dust/sludge and slag:

- Granite City Steel, IL (ILD008873937)
- ACME Steel Co. Riverdale Plant, IL (ILD020952362)
- Bethlehem Steel Corp. Burns Harbor Div., IN (IND003913423)
- Ispat Inland Inc., IN (IND005159199)
- USS Gary Works, IN (IND005444062)
- LTV Steel, Co., IN (IND005462601)
- AK Steel Corp., KY (KYD005013032)
- Bethlehem Steel, MD (MDD053945432)
- National Steel Corp. Great Lakes Ops., MI (MID004320479)
- Wheeling-Pittsburgh Steel Corp. Steubenville North, OH (OHD000810382)
- LTV Steel Co., Inc. Cleveland Works, OH (OHD004218673)
- AK Steel Corp. OH (OHD004234480)
- WCI Steel, Inc., OH (OHD060409521)
- Wheeling-Pittsburgh Steel Corp., Mingo Junction, OH (OHD980618177)
- Republic Tech. Intl. Lorain Plant, OH (OHR000037713)
- Allegheny Ludlum Corp., PA (PAD004335154)
- USS Mon Valley Works Edgar Thomson Plant, PA (PAD060682606)
- Geneva Steel, L.L.C., UT (UTD009086133)
- Weirton Steel Corp., WV (WVD000068908)
- Wheeling-Pittsburgh Steel Corp. Steubenville East, WV (WVD004319539)

Data associated with Bevill exempt materials were captured in a separate table in the database: “Bevill Exempt Industries Excluded.”

- Data reported by Offsite Treatment, Storage, and Disposal (TSD) Facilities. Facilities that reported the NAICS codes in Exhibit 3 as their primary NAICS code were excluded from the analysis in order to avoid double-counting of wastes reported by both generating and treatment facilities.

Exhibit 3
Industries Associated with Offsite Treatment, Storage, and Disposal (TSD)

NAICS Code	NAICS Code Description
327310	Cement Manufacturing
562000	Waste Management and Remediation Services
562100	Waste Collection
562110	Waste Collection
562111	Solid Waste Collection
562112	Hazardous Waste Collection
562119	Other Waste Collection
562200	Waste Treatment and Disposal
562210	Waste Treatment and Disposal
562211	Hazardous Waste Treatment and Disposal
562212	Solid Waste Landfill
562213	Solid Waste Combustors and Incinerators
562219	Other Nonhazardous Waste Treatment and Disposal
562900	Remediation and Other Waste Management Services
562910	Remediation Services
562920	Materials Recovery Facilities
562990	All Other Waste Management Services
562991	Septic Tank and Related Services
562998	All Other Miscellaneous Waste Management Services

Data for all facilities identified above were captured in a separate table in the database: “Offsite TSD Facilities Excluded.”

- Data reported by facilities represented by NAICS Code 924110. Facilities that reported the NAICS code 924110 (i.e., administration of air and water resource and solid waste management programs) as their primary NAICS code were excluded from the analysis. As defined by the U.S. Census Bureau, NAICS code 924110 comprises government establishments primarily engaged in one or more of the following:
 - The administration, regulation, and enforcement of air and water resource programs;
 - The administration and regulation of solid waste management programs;
 - The administration and regulation of water and air pollution control and prevention programs;
 - The administration and regulation of flood control programs;

- The administration and regulation of drainage development and water resource consumption programs;
- The administration and regulation of toxic waste removal and cleanup programs; and
- Coordination of these activities at intergovernmental levels.¹

Based on the above, facilities with primary NAICS code 924110 that reported to the TRI are undertaking Resource Conservation and Recovery Act (RCRA) corrective action or Superfund activities, and do not offer waste minimization opportunities at the primary generation level.

All data reported by the U.S. DOE Hanford site (TRI ID 99352-SPDRT-POBOX) were considered NAICS code 924110. As such, the data for this facility were excluded from the analysis.

Data for all facilities identified above were captured in a separate table in the database: “NAICS 924110 Facilities Excluded.”

Note that, originally, this methodology relied on Standard Industrial Classification (SIC) codes to identify facilities that are not associated with primary generation. However, because facilities began to report NAICS codes for reporting year 2006, the methodology has been revised in order to use NAICS codes in the identification of these facilities. Attachment A presents the data used in the conversion of SIC codes into NAICS codes.

Step 3: Calculate PC Quantities

As the purpose of this methodology is to identify those quantities that are amenable to waste minimization for PCs contained in both RCRA Subtitle C and Subtitle D wastes,² it is necessary to identify which sections of the TRI generally apply to Subtitle C wastes and which sections generally apply to Subtitle D wastes. Exhibit 4 presents conclusions regarding this issue for all relevant sections of TRI Form R.

In calculating PC quantities associated with on-site management methods, it is generally assumed that:

- If the generating facility has a valid RCRA identification number (ID), the wastes are regulated under Subtitle C; and
- If the generating facility does not have a valid RCRA ID number, the wastes are regulated under Subtitle D.

¹ U.S. Census Bureau, *2002 NAICS Definitions*, available at <http://www.census.gov/epcd/naics02/naico602.htm>, last accessed on March 6, 2008.

² RCRA Subtitle C establishes a program for the management of hazardous wastes. RCRA Subtitle D establishes a program for the management of non-hazardous solid wastes (e.g., non-hazardous industrial solid waste).

In calculating PC quantities associated with off-site management methods, it is generally assumed that:

- If the generating facility and the off-site facility have valid RCRA ID numbers, the wastes are regulated under Subtitle C;
- If the generating facility has a valid RCRA ID number, but the off-site facility does not have a valid RCRA ID number, the wastes are regulated under Subtitle D; and
- If the generating facility does not have a valid RCRA ID number, the wastes are regulated under Subtitle D.

Based on the above information, generating facilities with valid RCRA ID numbers may have reported wastes regulated under Subtitle C and Subtitle D, while generating facilities without valid RCRA ID numbers will have reported wastes regulated under Subtitle D.

The equations used to calculate the PC quantities associated with Subtitle C activities are presented in Exhibit 5. The equations used to calculate the PC quantities associated with Subtitle D activities are presented in Exhibit 6.

Exhibit 4

Description of TRI Form R Sections

Section of Form R	Data Element Description	Associated with Subtitle C	Associated with Subtitle D
Part I of Form R			
4.1	Mailing Address	No--Not relevant to waste minimization	No--Not relevant to waste minimization
4.3	Technical Contact Name, Telephone Number, and E-mail Address	No--Not relevant to waste minimization	No--Not relevant to waste minimization
Part II of Form R			
5.1	Fugitive air	No--Not relevant to waste minimization	No--Not relevant to waste minimization
5.2	Point-source air	No--Not relevant to waste minimization	No--Not relevant to waste minimization
5.3	Surface-water discharge	No--Not relevant to waste minimization	No--Not relevant to waste minimization
5.4.1	Underground injection on-site to Class I wells	Yes, if generating facility has a valid RCRA ID number	Yes, if generating facility does not have a valid RCRA ID number
5.4.2	Underground injection on-site to Class II-V wells	No	Yes
5.5.1A	Disposal in RCRA Subtitle C landfills	Yes	No
5.5.1B	Other landfills	No	Yes
5.5.2	On-site land treatment	No	Yes
5.5.3	On-site surface impoundment	Yes, if generating facility has a valid RCRA ID number	Yes, if generating facility does not have a valid RCRA ID number
5.5.3A	Subtitle C surface impoundment	Yes	No
5.5.3B	Other surface impoundment	No	Yes
5.5.4	Other on-site disposal	No	Yes
6.1	Discharges to Publicly Owned Treatment Works (POTWs)	Yes, if generating facility has a valid RCRA ID number	Yes, if generating facility does not have a valid RCRA ID number
6.2	Transfers to Other Off-Site Locations	Yes, as specified in the equations presented in Exhibit 5	Yes, as specified in the equations presented in Exhibit 6
8.1	Total releases	Yes, if generating facility has a valid RCRA ID number	Yes, if generating facility does not have a valid RCRA ID number
8.2	On-site energy recovery	Yes, if generating facility has a valid RCRA ID number	Yes, if generating facility does not have a valid RCRA ID number
8.3	Off-site energy recovery	Yes, as specified in the equations presented in Exhibit 5	Yes, as specified in the equations presented in Exhibit 6
8.4	On-site recycle	Valid waste minimization method	Valid waste minimization method
8.5	Off-site recycle	Valid waste minimization method	Valid waste minimization method
8.6	On-site treatment	Yes, if generating facility has a valid RCRA ID number	Yes, if generating facility does not have a valid RCRA ID number
8.7	Off-site treatment	Yes, as specified in the equations presented in Exhibit 5	Yes, as specified in the equations presented in Exhibit 6
8.8	Remedial actions, catastrophic events, or one-time events	Not amenable to minimization	Not amenable to minimization

Exhibit 5

Equations Used to Calculate Priority Chemical (PC) Quantities Associated with RCRA Subtitle C Activities

Equation ^{a, b}	Comments
On-Site Disposal	
[5.4.1] + [5.5.1A] + [5.5.3] + [5.5.3A]	<ul style="list-style-type: none"> ▪ The quantities reported in Sections 5.5.1A and 5.5.3A are by definition Subtitle C quantities; thus, it is not necessary to determine whether the generating facility has a valid RCRA ID number. ▪ Only Section 5.4.1 and 5.5.3 quantities reported by generating facilities with a valid RCRA ID number are included in the calculation. ▪ Section 5.5.3A was added to Form R in reporting year 2003.
Off-Site Disposal^c	
[6.1(metals and metal compounds)] + [<i>Subtitle C Disposal Off-Site Transfers</i>]	<ul style="list-style-type: none"> ▪ Only Section 6.1 quantities reported by generating facilities with a valid RCRA ID number are included in the calculation. ▪ <i>Subtitle C Disposal Off-Site Transfers</i> consists of the following two components: <ul style="list-style-type: none"> – Quantities associated with disposal codes M41, M62, M63, M71, M72, M81, M90, M94, and M99 sent to off-site facilities with a valid RCRA ID number. – Quantities associated with disposal codes M65 and M66. The quantities associated with these disposal codes are by definition Subtitle C quantities; thus, it is not necessary to determine whether the off-site facility has a valid RCRA ID number. ▪ Facilities began to report M63 and M65 quantities in reporting year 2002. ▪ Facilities began to report M66 and M81 quantities in reporting year 2003.
On-Site Energy Recovery	
[8.2]	<ul style="list-style-type: none"> ▪ Only Section 8.2 quantities reported by generating facilities with a valid RCRA ID number are included in the calculation.

Off-Site Disposal^c	
[6.1(metals and metal compounds)] + [<i>Subtitle D Disposal Off-Site Transfers</i>]	<ul style="list-style-type: none"> ▪ Only Section 6.1 quantities reported by generating facilities without a valid RCRA ID number are included in the calculation. ▪ <i>Subtitle D Disposal Off-Site Transfers</i> consists of the following two components: <ul style="list-style-type: none"> – Quantities associated with disposal codes M64, M67, and M82. The quantities associated with these disposal codes are by definition Subtitle D quantities; so, it is not necessary to determine whether the off-site facility has a valid RCRA ID number. – Quantities associated with disposal codes M73 and M79 are assumed to be Subtitle D quantities. – Quantities associated with disposal codes M41, M62, M63, M71, M72, M81, M90, M94, and M99 sent to off-site facilities without a valid RCRA ID number. ▪ Facilities began to report quantities to disposal codes M63 and M64 in reporting year 2002. ▪ Facilities began to report quantities to disposal codes M67, M81, and M82 in reporting year 2003.
On-Site Energy Recovery	
[8.2]	<ul style="list-style-type: none"> ▪ Only Section 8.2 quantities reported by generating facilities without a valid RCRA ID number are included in the calculation.
Off-Site Energy Recovery	
[8.3] + [<i>Subtitle D Energy Recovery Off-Site Transfers</i>]	<ul style="list-style-type: none"> ▪ Only Section 8.3 quantities reported by generating facilities without a valid RCRA ID number are included in the calculation. ▪ <i>Subtitle D Energy Recovery Off-Site Transfers</i> consists of quantities associated with energy recovery codes M56 and M92 sent to off-site facilities without a valid RCRA ID number.
On-Site Treatment^d	
[8.6]	<ul style="list-style-type: none"> ▪ Only Section 8.6 quantities reported by generating facilities without a valid RCRA ID number are included in the calculation.
Off-Site Treatment^d	
[8.7] + [<i>Subtitle D Treatment Off-Site Transfers</i>]	<ul style="list-style-type: none"> ▪ Only Section 8.7 quantities reported by generating facilities without a valid RCRA ID number are included in the calculation. ▪ <i>Subtitle D Treatment Off-Site Transfers</i> consists of quantities associated with treatment codes M40, M50, M54, M61, M69, and M95 sent to off-site facilities without a valid RCRA ID number.

^a Equations refer to TRI Form R section numbers described in Exhibit 4.

^b Negative quantities are revised to zero.

^c M10 (transfer offsite to storage) is not included in off-site disposal calculations because the waste is stored only – no disposal takes place during the reporting year.

^d M20 (solvents/organics recovery), M24 (metals recovery), M26 (other reuse or recovery), M28 (acid regeneration), and M93 (transfer to waste broker – recycling) are not included in off-site treatment calculations because total recycling quantities are captured in Section 8 data.

As shown in Exhibits 5 and 6, PC quantities are calculated using data reported in Sections 5 and 6 of TRI Form R. Note, however, that data reported in these sections include all releases and transfers, regardless of whether they arise from catastrophic, remedial, one-time, or routine process operations. Because the purpose of this methodology is to identify those quantities that are amenable to waste minimization, it is necessary to minimize the effect that releases arising from catastrophic, remedial, or one-time events (i.e., quantities reported in Section 8.8 of TRI Form R) may have on the PC quantities. The criteria used to account for these releases are presented in Exhibit 7.

Two examples of the application of the criteria in Exhibit 7 are presented in the following paragraphs:

- Example 1: For lead, *Facility A* reported releases from catastrophic, remedial, one-time, or routine process operations of 30 pounds (Section 8.8). In addition, all PC quantities calculated for this facility using the equations in Exhibits 5 and 6 are equal to zero, with the exception of Subtitle D off-site disposal. The estimated Subtitle D off-site disposal quantity equals 30 pounds.

Based on the above information, the 30 pounds of lead released by this facility are associated with catastrophic, remedial, one-time, or routine process operations. That is, the PC quantity reported in Section 8.8 is equal to the Subtitle C and D Total. As a result, Subtitle D off-site disposal was updated to zero.

- Example 2: For naphthalene, *Facility B* reported fugitive air emissions of 1,300 pounds (Section 5.1); surface water discharges of 60 pounds (Section 5.3); and releases from catastrophic, remedial, one-time, or routine process operations of 125 pounds (Section 8.8). There were no recycling activities associated with this PC (Sections 8.4 and 8.5).

Exhibit 7
Criteria Used to Account for TRI Form R Section 8.8 Quantities When Calculating
Priority Chemical (PC) Quantities Associated with RCRA Subtitle C and D Activities

Criteria ^{a, b}		Revision to PC Quantities
[8.8] = 0		None.
[8.8] > 0	[8.8] = [Subtitle C and D Total]	All PC quantities calculated using the equations in Exhibits 5 and 6 were updated to zero.
	[8.8] > [Subtitle C and D Total]	None.
	[8.8] < [Subtitle C and D Total] AND [8.8] = [5.1] + [5.2]	None.
	[8.8] < [Subtitle C and D Total] AND [8.8] = [5.3]	None.
	[8.8] < [Subtitle C and D Total] AND [8.8] = [5.1] + [5.2] + [5.3]	None.
	[8.8] < [Subtitle C and D Total] AND [8.8] = [8.4]	None.
	[8.8] < [Subtitle C and D Total] AND [8.8] = [8.5]	None.
	All Remaining Records	PC quantities calculated using the equations in Exhibits 5 and 6 (i.e., original PC quantities) were updated by undertaking the following steps: 1. Estimate percentage of <i>Subtitle C and D Total</i> for each original PC quantity. 2. Assign portion of Section 8.8 quantity to each PC quantity category (e.g., Subtitle C on-site disposal, Subtitle D on-site disposal) based on percentages estimated under Step 1. 3. Update PC quantities by subtracting estimated Section 8.8 quantity (i.e., quantity estimated under Step 2) from original PC quantities.

^a Equations refer to TRI Form R section numbers described in Exhibit 4.

^b *Subtitle C and D Total* refers to the sum of all PC quantities calculated using the equations in Exhibits 5 and 6.

PC quantities calculated for *Facility B* using the equations in Exhibits 5 and 6 (i.e., original PC quantities) include those shown in Exhibit 8.

Exhibit 8
PC Quantities Used for Facility B in Example 2

PC Quantity Category	Original PC Quantity
Subtitle C on-site disposal	130,000
Subtitle C off-site disposal	0
Subtitle C on-site energy recovery	0
Subtitle C off-site energy recovery	1,205,000
Subtitle C on-site treatment	1,000
Subtitle C off-site treatment	0
Subtitle D on-site disposal	0
Subtitle D off-site disposal	0
Subtitle D on-site energy recovery	0
Subtitle D off-site energy recovery	6,000
Subtitle D on-site treatment	0
Subtitle D off-site treatment	453,000
Subtitle C and D Total	1,795,000

Based on the above information and the criteria presented in Exhibit 7, the PC quantities must be updated in order to minimize the effect that releases arising from catastrophic, remedial, or one-time events (i.e., quantities reported in Section 8.8) may have on the PC quantities. Specifically, the “all remaining records” criterion must be applied. Exhibit 9 presents the results of each of the steps undertaken to update the PC quantities.

Exhibit 9
Subtitle C and Subtitle D Quantities for Facility B in Example 2, After Undertaking the Steps in Exhibit 7

PC Quantity Category	Original PC Quantity	Percent of Subtitle C and D Total ^a	Assigned Portion of Section 8.8 Quantity ^b	Updated PC Quantity ^c
Subtitle C on-site disposal	130,000	7%	9	129,991
Subtitle C off-site disposal	0	0%	0	0
Subtitle C on-site energy recovery	0	0%	0	0
Subtitle C off-site energy recovery	1,205,000	67%	84	1,204,916
Subtitle C on-site treatment	1,000	0%	0	1,000
Subtitle C off-site treatment	0	0%	0	0
Subtitle D on-site disposal	0	0%	0	0
Subtitle D off-site disposal	0	0%	0	0
Subtitle D on-site energy recovery	0	0%	0	0
Subtitle D off-site energy recovery	6,000	0%	0	6,000
Subtitle D on-site treatment	0	0%	0	0
Subtitle D off-site treatment	453,000	25%	32	452,968
Subtitle C and D Total	1,795,000	100%	125	1,794,875

^a Calculated by dividing the PC quantity (e.g., Subtitle C on-site disposal) by the Subtitle C and D Total.

^b Calculated by multiplying the percent of Subtitle C and D Total by the Section 8.8 quantity (i.e., 125 pounds).

^c Calculated by subtracting the assigned portion of the Section 8.8 quantity from the original PC quantity.

2. TRI Data Used in the Development of the Databases that Implement the Methodology

In developing the Microsoft Access databases that implement the PC TRI Measurement Methodology, EPA used TRI data for reporting years 2003 through 2007. The data are frozen as of September 10, 2008. These data were extracted from TRI data files provided by EPA's Office of Environmental Information (OEI) on December 16, 2008. For each of the data files, Attachment B identifies the specific data elements that were used in the development of the databases.

3. Development of the Databases that Implement the Methodology

The methodology described in Section 1 of this memorandum was implemented by conducting a series of queries in six Microsoft Access databases. The final tables generated by these queries were compiled in a separate Microsoft Access database: "Priority Chemicals Summary_PC TRI Methodology.mdb." In addition to the final tables, this database includes a number of queries that summarize PC and facility data at various levels of interest (i.e., PC, EPA Region, State, industry sector).

EPA notes that it was necessary to import all of the data elements in the TRI data fields into Microsoft Access as text. Queries then converted text into numbers, as appropriate, to facilitate calculations. EPA also notes that some field names may be too long to be imported into Microsoft Access. Consequently, Microsoft Access assigned default data field names to them

(e.g., “Field178”). These default names were then replaced with abbreviated data field names based on information contained in the databases and documentation provided by EPA.

Exhibit 10 provides the name, size, and primary function of each of the six Microsoft Access databases that implement the methodology. In developing each of these databases, EPA named the databases and queries in sequential order. That is, the name of the databases and queries indicate the order in which they should be implemented.

EPA notes that the Part 1 through Part 6 databases contain “instruction queries.” These “instruction queries” are, in fact, *blank* queries that provide instructions on the actions that should be undertaken by the person implementing the queries. For example, the name of the first query in the Part 1 database is “Step 001 Instruction Qry_Import US_1_2003_v06 as Text.” This query indicates that TRI data file “US_1_2003_v06” should be imported into the database as text.

Exhibit 10

Name, Size, and Primary Function of the Microsoft Access Databases Used to Implement the Methodology^a

Microsoft Access Database Name	Size	Primary Function of the Database
PC TRI Methodology_Part 1_2003.mdb	577 MB	Create a table that contains RCRA Subtitle C and D quantities for PCs reported in Form R of the 2003 TRI for use in the Part 6 database
PC TRI Methodology_Part 2_2004.mdb	567 MB	Create a table that contains RCRA Subtitle C and D quantities for PCs reported in Form R of the 2004 TRI for use in the Part 6 database
PC TRI Methodology_Part 3_2005.mdb	561 MB	Create a table that contains RCRA Subtitle C and D quantities for PCs reported in Form R of the 2005 TRI for use in the Part 6 database
PC TRI Methodology_Part 4_2006.mdb	536 MB	Create a table that contains RCRA Subtitle C and D quantities for PCs reported in Form R of the 2006 TRI for use in the Part 6 database
PC TRI Methodology_Part 5_2007.mdb	519 MB	Create a table that contains RCRA Subtitle C and D quantities for PCs reported in Form R of the 2007 TRI for use in the Part 6 database
PC TRI Methodology_Part 6_2003 thru 2007.mdb	836 MB	Create tables that contain RCRA Subtitle C and D quantities for PCs reported in Form R of the 2003 - 2007 TRI

^a These files contain data on selected non-PC chemicals that were included in the PC TRI Measurement Methodology but are not included in the 2007 Trends Report.

EPA also notes that specific information on the following topics is available in each of the Microsoft Access databases:

- Tables used in each of the queries;
- Data fields extracted from each table;
- Data field definitions;
- Criteria used in the development of the queries;
- SQL statements ³; and
- Data quality queries.

4. Quality Assurance Activities

In developing the Part 1 through Part 6 databases, EPA made revisions to the data contained in the original TRI data files (e.g., “US_1_2003_v06”) provided by OEI. These revisions were based on updated TRI data gathered by EPA’s Office of Resource Conservation and Recovery (ORCR) through QA activities. In addition, EPA performed a data quality check to verify facility status information reported to the TRI. A description of the QA activities performed by EPA is presented in the following subsections.

4.1 TRI Data Updates

EPA reviewed information in Attachment C to identify which data updates had been incorporated into the original TRI data files provided by OEI. Based on this review, EPA determined whether the updates needed to be incorporated into the data sets. Determinations on this matter are reflected in Exhibit C-1 of Attachment C. A “Y” in the last column of the table indicates that the original data files contained the data update. An “N” in the last column of the table indicates that the original data files did not contain the data update. In instances in which the data update had not been incorporated into the original data file, the data set was revised in order to reflect the results of the QA activities performed by ORCR.

4.2 Facility Status

EPA performed a data quality check to ensure that facilities who reported as Federal facilities or government owned and contractor operated (GOCO) facilities are actually a Federal facility or a GOCO facility. This data quality check was not performed for each facility in the TRI data sets. Rather, the data quality check focused on identifying and correcting obvious errors in facility status. Information used in this data quality check is presented in Attachment C.

4.3 RCRA IDs

Prior to the 2006 TRI reporting year, facilities reported their RCRA ID(s) on Form R. Beginning with the 2006 TRI reporting year, EPA linked active RCRA ID(s) obtained from RCRAInfo to the TRI facility via its Federal Registry System. EPA performed a data quality

³ To view a query’s underlying SQL statement, open the query and, on the toolbar, select “View.” Then, select “SQL View.”

check to ensure that the RCRA ID(s) assigned to the facilities for TRI reporting year 2007 are the same as the RCRA ID(s) associated with the facilities in the 2003 through 2006 TRI reporting years.
